inducible immunity-1 (NIM) protein. Sequences shown in AAV43661 to
AAV43665 represent variants of the NIM1 CDNA. The invention provides a
chimeric gene comprising a promoter active in plants operatively linked
to a DNA molecule that encodes an altered form of the NIM1 protein. Plant
c calls stably transformed with a recombinant vector comprising such a
chimeric gene have a broad spectrum of disease resistance. The altered
c himeric gene have a broad spectrum of disease resistance. The altered
c himeric gene have a broad spectrum of disease resistance. The altered
c himeric gene have a broad spectrum of disease resistance.
CC acquired resistance (SAR) signal transduction pathway. The transgenic
plants transformed with an altered NuM1 gene exhibits constitutive SAR
expression which is higher in the transformed plants than in a wild-type
plant. The products can be used for producing plants with a broad
c spectrum disease resistance. Overexpression of NIM1 minics the effects
c finducer. compounds that induce constitutive immunity (CIM) phenotype
c in plants. The inventions can be used with plants such as rice, wheat,
barley, rye, corn, potato, carrot, sweet potato, sugar beet, bean, pea,
chicory, lettuce, cabbage, cauliflower, broccoli, turnip, radish,
spinach, asparagus, onion, garlic, eggplant, pepper, celery, carrot,
spinach, asparagus, onion, garlic, eggplant, pepper, celery, carrot,
c squash, pumpkin, zucchini, cucumber, saple, pear, quince, melen, plum,

The present invention is concerned with the isolation of NIMI homologues and their coding sequences from Arabidopsis thaliana, Brassica napus, Nicotiana tabacum, Lycopersicon esculentum, Beta vulgaris, Helianthus annous and Solanum tuberosum. NIMI is one of the proteins involved in the signal transduction cascade leading to systemic acquired resistance (SAR) in plants. This gives the plants an increased resistance to disease. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         gene and protein can be used to produce transgenic plants resistant to diseases caused by viruses, such as tobacco or cucumber mosaic virus, ringspot virus, pelargonium leaf curl virus, red clover mottle virus, tomato bushy stunt virus, fungi, including Phythophthora parasitica and Peronospora tabacina, bacteria such as Pseudomonas syringae and Ptabaci, insects, including aphids and lepidoptera and nematodes such as Meloidogyne incognita. In particular they can be used against disease

The invention relates to rice proteins (AAB29749-B29757) and the nucleotides encoding the proteins (AAC81456-C81464), which are involved in the induction of systemic acquired resistance (SAR), a general plant resistance response that can be induced during a local infection by an avirulent pathogen. A rice cDNA library was screened using the yeast two hybrid system with Arabidopsis NRP1 cDNA as bait, and the rice proteins hym (proline rich NPR1 interactor; AAB29749) and MN1 (AAB29758) were identified as interacting with Arabidopsis NPR1. The rice cDNA library was then rescreened using rice PNI cDNA or rice MN1 CDNA as bait. Rice NH1 and NH2 (NPR homologues I and-2; AAB29753), and a protein with no protein (AAB29754) were identified as interacting with PNI convn homology (AAB29754) were identified as interacting with PNI AAB29755, AAB29755, and a protein with homology (AAB29755) and rice ARPA (a protein with homology to rat microtubule-associated protein; AAB29757) were found to interact with and rice ARPA in invention additionally encompasses irangenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           plants comprising an expression cassetteen of the invention, and a method for enhancing resistance to pathogens in a plant by introducing the expression cassette into the plant, and selecting the plant with enhanced resistance. The rice SAR-associated nucleic acids and proteins are useful for enhancing plant resistance to pathogens such as viruses, bacteria, nematodes, inngi or insects. The present sequence represents cDNA encoding rice NHI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rice; NH1; NPR1 homologue 1; PNI interactor; SAR; bZ1P protein;

The present sequence is a putative version of the rice negatively phytochrome regulated 1 (NPR1) gene coding sequence. It was isolated by screening a leaf cDNA library for those sequences which were similar to the NPR1 gene from Arabidopsis thaliana. The protein is involved in systemic acquired resistance and this gene can be used to create transgenic plants which are protected from pathogens. It can also
                                                                                                                                                                                                                                                                  CACTCTCTAGGAACTGTAGAACTTGGAAAACGCTTCTTTCCACGTTGTTCAGAAGTTCTAA 1779

```

This sequence encodes a truncated variant NIM-1 protein from Arabidopsis thaliana. This protein is used in a method resulting in the protection of an immunomodulated plant having a first level of resistance and involves treatment with at least 1 microbicide that confers a second level of resistance, such that the plants have a third level of resistance greater than the sum of the first two levels. The method can be applied to a wide variety of plants (cereals, fruits, oilseeds, vegetables etc.) to protect against viruses, fungi, bacteria, insects and nematodes. The method of micobicide used. Since the process involves two different methods of protection, it is unlikely that the pathogen will develop resistance to 25255555555555x8

Sequence 1597 BP; 467 A; 304 C; 381 G; 445 T; 0 other;

condicible immunity-1 (NIM) protein. Sequences shown in AAV33661 to AAV4365 represent variants of the NIM1 CDNA. The invention provides a chiefful immunity-1 (NIM1) protein. Sequences shown in AAV43661 to AAV4365 represent variants of the NIM1 CDNA. The invention provides a chiefful stably transformed with a recombinant vector comprising such a chiefful stably transformed with a recombinant vector comprising such a chiefful stably transformed with a recombinant vector comprising such a chimeric gene have a broad spectrum of disease resistance. The altered compined resistance (SAR) signal transduction pathway. The transgenic plants transformed with an altered NIM1 gene exhibits constitutive SAR expression which is higher in the transformed plants than in a wild-type plant. The products can be used for producing plants with a broad spectrum disease resistance. Overexpression of NIM1 mimics the effects of inducer compounds that induce constitutive immunity (CIM) phenotype in plants. The inventions can be used with plants such as rice, wheat, barley, rye, corn, potato, carrot, sweet potato, sugar beet, bean, pea, chicory, lettuce, cabbage, cauliflower, broccoll, turnip, radish, spanagus, onion, garlic, eggplant, pepper, celery, carrot, squash, pumpkin, zucchini, cucumber, apple, pear, quince, melon, plum, chemical application, apricot, strawberry, grape, raspbarry, comato, sorghum and sugarcene. The plants produced are resistant to a plackberry, planeapple, avocado, papaga, mango, banana, soybean, tobacco, comato, sorghum and sugarcene. The plants produced are resistant to a paridoch, as white such as virtuely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          plant pathogens such as viruses, viroids, fungi, bacteria, insects such as aphids and lepidoptera and nematodes. The plants produced can be used
                                                                                                                                                                                                                                                                                                               Use of non-inducible immunity-1 gene - for transforming plants to produce transgenic plants having a broad spectrum disease resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                               This cDNA encodes an altered form of the Arabidopsis thaliana Inducible immunity-1 (NIM1) protein. Sequences shown in AAV436
                                                                                                                                                              Steiner HY;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 12, Al

Patent No. 5986082
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Uknes, Scott
APPLICANT: Hunt, Michelle
APPLICANT: Steiner, Henry-York
APPLICANT: Ryals, John
TITLE OF INVENTION: ALTERED FORMS OF THE NIM1 GENE CONFERRING
TITLE OF INVENTION: DISEASE RESISTANCE IN PLANTS
```

//note—Vector: Bluescript SK(-); Site_1: EcoRI; Site_2:
XhoI; Suspension cultures of L.esculentum E6203 were grown
in Murashige and Skoog based medium, supplemented with 15%
coconut milk (filter sterilized and added after
autoclaving), 2% saccharose, and Img/ml 2,40 (pH5.8).
Fresh medium was added every 7 days, and cultures were
grown at 25 C, with 12hrs of light and continuous
shaking."

'Supernod' plants generoually donated by Dr. Gary Stacey.
The seedlings were innoculated with Bradyrhizobium
japonicus, strain USDAILO priot to harvest. Stratagene's
cDNA synthesis Kit (catalog number 200401) was used to
synthesize the cDNA. First-strand synthesis was performed
with Smethyl dCTP, hence the ligated CDNA was
hemimethylated. A modification of Stratagene's
first-strand synthesis primer was used. An 'anchor'
nucleotide (V-A.C. or G) was added to the 3' end of the
primer [GAGAGAGAGAGAGAACARGTCTCGAG[T]]8V] to anchor
the primer at the 5' end of the poly(A) tract. After
second-strand synthesis, the cDNA ends were filled in with
cloned Pfu DNA polymerase, ligated to EcoRI adapters and
subsequently phosphorylated. The XhoI site within the
first-strand synthesis primer was then restricted by
digestion with XhoI; all XhoI sites in the cDNA
constructs were size-fractionated with a 500bp cutoff,
using GibcoBRL Life Technologies' cDNA size Fractionation
Stratagene's splauescript II XR predigested with EcoRI
and XhoI, and phosporylated by Stratagene's Both the
white and blue colonies appear to contain recombinant
plasmids with CDNA inserts, based on size (n=25). This
library was constructed by Dr. Paul Keim and Dr. Virginia
Corpeal."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This clone is available through: ResGen, Invitrogen Corp. 2130 South Memorial Parkway Huntsville, AL 35801 For further information call: (800)-533-4363 contact via email: ccu@resgen.com
